Specimen Problem Statement for UXplore UXcelerate UXellence

The Forgotten Skills of Your Community:

Problem Statement
Within every community, there are individuals with valuable skills — retired teachers who can mentor, artists who can teach painting, musicians who can share their craft, or tech-savvy youngsters who can help elders with digital tools. Despite their talent, most of these skilled individuals remain unnoticed because there is no structured way to showcase their abilities or connect them with people who could benefit. As a result, knowledge exchange opportunities are lost, and communities miss out on fostering meaningful connections.

Your Challenge
Design a digital platform that highlights and connects skilled individuals within communities. Your solution should:

- Landing Page – Showcase categories of skills (education, arts, music, digital help, etc.) in a clear and engaging way.
- Profile/Skill Page – Provide details of the skill, availability, and a brief introduction about the individual.
- Interaction Features – Enable users to contact, book sessions, or collaborate with skilled individuals.
- Booking & Calendar Integration – Allow easy scheduling of sessions or workshops, with reminders for both parties.

Goal
To create a platform that celebrates and connects hidden talents in the community, enabling knowledge sharing, lifelong learning, and stronger social bonds through an intuitive and engaging user experience.
